

1/d hierarchy for the driven star

L0: weak mean field

$$\mathbf{B}_{\text{eff}}(t) = \mathbf{B}_0(t) + \sum_c K_c(t) \mu_c(t)$$

one driven hub spin

$O(1/d)$ correction $\rightarrow$

G1: Gaussian influence

sum over leaves

double-time kernel

$\kappa_c(t, t')$ paired with $G_0(t, t')$

nonlocal in time
